

Management Sciences Topics: Convex  
Optimization  
Homework 1: Due Jan 30 (11:59 pm)

Chuan Lu

(You can directly use any properties, theorems, examples or facts from the lectures.)

**Problem 1:** Are the following sets convex? You only need to answer yes or no and don't need to provide reasons.

- a.  $\{(x, y) \in \mathbb{R}^2 | |xy| \geq 1\}$ .
- b.  $\{(x, y) \in \mathbb{R}^2 | x \text{ is a positive integer}\}$ .  
Nonconvex.
- c.  $\{(x, y) \in \mathbb{R}^2 | x^2 + y^2 \leq 1 \text{ or } x + y \leq 0\}$ .
- d.  $\{(x, y) \in \mathbb{R}^2 | x^2 + y^2 \leq 1 \text{ and } x + y \leq 0\}$ .
- e.  $\{(x, y) \in \mathbb{R}^2 | x^2 + y^2 = 1\}$ .
- f. The set of all copositive matrices:  $\{X \in \mathbb{S}^n | \mathbf{u}^\top X \mathbf{u} \geq 0 \text{ for any } \mathbf{u} \geq 0\}$ .
- g. Second order cone:  $\{(\mathbf{x}, t) \in \mathbb{R}^{n+1} | \|\mathbf{x}\|_2 \leq t\}$ , where  $\|\cdot\|_2$  represents the Euclidean norm.
- h. The set of all rank-one  $n \times n$  positive semi-definite matrices:  $\{X \in \mathbb{S}^n | X = \mathbf{x}\mathbf{x}^\top, \mathbf{x} \in \mathbb{R}^n\}$ .
- i.  $\{X \in \mathbb{S}^n | -1 \leq \text{tr} X \leq 1\}$ , where  $\text{tr} X = \sum_{i=1}^n X_{ii}$  is the trace of  $X$ .

**Problem 2:** Are the following functions convex? You need to provide reasons only if your answer is Yes.

- a.  $f(X, Y) = \lambda_{\max}(X - Y)$  where  $X, Y \in \mathbb{S}^n$ .
- b. Hinge loss function:  $f(\mathbf{x}) = \frac{1}{n} \sum_{i=1}^n \max\{1 - b_i \mathbf{a}_i^\top \mathbf{x}, 0\}$  where  $\mathbf{a}_i \in \mathbb{R}^n$  is a feature vector and  $b_i \in \{1, -1\}$  is the class label of instance  $i$  for  $i = 1, \dots, n$ .

c.

$$f(x) = \begin{cases} x \ln(x) & \text{if } 0 < x \leq 1 \\ +\infty & \text{otherwise} \end{cases}$$

d. Entropy function:

$$f(\mathbf{x}) = \begin{cases} \sum_{i=1}^n x_i \ln(x_i) & \text{if } \sum_{i=1}^n x_i = 1 \text{ and } x_i > 0 \text{ for all } i \\ +\infty & \text{otherwise} \end{cases}$$

e. The density function of a standard univariate Gaussian distribution  $\mathcal{N}(0, 1)$ .

g. Sigmoid function:  $f(x) = \frac{\exp(x)}{1+\exp(x)}$  for  $x \in \mathbb{R}$ .

f.  $f(x) = \min\{x, 0\}$  for  $x \in \mathbb{R}$ .

h.  $f(x) = (\max\{x, 0\})^2$  for  $x \in \mathbb{R}$ .

i.  $f(x) = (\max\{x, -1\})^2$  for  $x \in \mathbb{R}$ .

j.  $f(x) = h(g(x))$  where  $g(x) = x^2$  and  $h(x) = \mathbf{1}_{[1,2]}(x) = \begin{cases} 0 & \text{if } x \in [1, 2] \\ +\infty & \text{otherwise} \end{cases}$ ,  
i.e., the indicator function of  $[0, 1]$ .

**Problem 3:** Suppose  $f$  is an extended-real-valued function on  $\mathbb{R}^n$ . Show that  $f$  is convex if and only if  $g_{\mathbf{x}}(t) := f(\mathbf{x} + t\mathbf{v})$  (as a function on  $\mathbb{R}$ ) is convex for any  $\mathbf{x}$  and  $\mathbf{v}$  in  $\mathbb{R}^n$ .
